**PLEASE BRING THIS CATALOGUE TO
THE SALE AND BE SURE OF HAVING ONE**

BUYERS INFORMATION

Inspection - All cattle will be available from 10am Sale day. Private inspection by appointment prior to the sale by contacting Jack on 0429 689 034

Delivery - We are pleased to offer free delivery up to 300km. Delivery can be given at completion of sale while all care will be taken, no responsibility can be accepted whilst awaiting delivery.

Health - All bulls have been vaccinated for Vibrio, 7in1, Pestivirus and drenched prior to the 2021 sale. The Cascade Studs are located in a Bovine Johne's Disease protected clean area. Cascade Poll Herefords and Angus are J-BAS6.

Fertility - Our sale bulls have been semen tested prior to sale day. **All Semen will be Morphology tested.**

Bulls: Important Please read.

1. The seller warrants that:
 - (1) Bulls (except for bull calves at foot with their dam) are fertile and capable of natural service within 6 months of date of sale to the purchaser ("Warranty Period"); and
 - (2) bulls are of the parentage as catalogued.
2. The seller will credit or refund the purchase price of bulls (excluding any costs and expenses to the purchaser in taking delivery):
 - (1) where the purchaser claims a bull is infertile, upon the purchaser submitting a veterinary report after the expiration of the Warranty Period stating that the bull is infertile or incapable of natural service, and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The veterinarian must state that is his/her opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The veterinary report and Statutory Declaration must be forwarded to the seller within 14 days of the Warranty Period expiring.
 - (2) where the purchaser claims the bull is not of parentage catalogued, upon the purchaser submitting a DNA test or blood test within the Warranty Period indicating that the animal is not of stated parentage.
3. The purchaser acknowledges that the purchaser does not rely and it is unreasonable for the purchaser to rely on the skill or judgement of the seller as to whether the bulls supplied are reasonably fit for any purpose for which they are being acquired.
4. To the extent permitted by law all other conditions and warranties implied by law in respect of the state, quality or condition of the bulls which may apart from this clause be binding on the Seller are excluded.
5. The Seller has no liability (including liability in negligence) to any person for any loss or damage consequential or otherwise suffered or incurred by that person arising from the sale of the bulls purchaser.

Insurance - No Vendor Insurance on Sale Bulls. It will be the responsibility of the purchasers to insure their bulls. Representatives from Insurance companies will be at the Sale.

Phone Bidding - Phone bidding can be organised through the agents Davidson Cameron.

Rebate - 2% rebate to outside agents introducing buyers in writing 24 hours prior to the Sale.

GST -will be added to the purchase price at the fall of the Auctioneers hammer. You will be invoiced purchase price plus GST.

Additional Information: Supplementary sheets will be available on sale day.

Foreword

Welcome to Cascade for our 18th Annual Sale

Despite the drastic changes the world has seen over the last 12 months, it has been a fantastic year in farming! We are seeing record high cattle and sheep prices and impressive yields in the grain industry. National confidence in Agriculture is solid and with any luck, that is how it will remain, our feeling is that it will hold strong into the foreseeable future. The last 5 months have seen up to 500mm of rain across the district again this year, with current and upcoming forecasts favourable to all involved in Australian Agriculture.

We are proud to offer 72 quality bulls for your inspection for our 18th Annual on Property Bull Sale. Within the current market, we encourage those of you looking to rebuild your herds to focus on quality ahead of quantity.

These bulls, despite having been born in one of the worst droughts we have seen, have grown out extremely well and we are confident they are ready to work for you. All lots have passed semen and morphology testing by Brendan Coonan at Northern Artificial Breeders. Like you, we believe carrying unproductive stock is unsustainable and have the upmost confidence in the fertility of our entire 2021 catalogue.

This year's draft of bulls, like other years, have been bred using what we believe to be the most important commercial principles – fertility, functionality and the ability to satisfy a variety of market specifications. Our aim is to maximise the productivity and profitability of every beef enterprise using our seedstock genetics. We take great pride in the reputation of our herd to breed quiet cattle, and continually meet this target through the use of experienced handlers.

As predicted, the beef market has again continued to soar over the past 12 months with ongoing demand, and limited supply as a result of so many in the market looking to rebuild their herd, whether that be for commercial or stud purposes. Not only beef, but commodity prices as a whole have seen a large boost on the back of varying conditions and situations.

We believe the sale bulls to be fertile, docile, structurally sound and ready to work for you. If we can be of any assistance, please don't hesitate to call. We look forward to seeing you on sale day.

Karen, Jack and Kathy, Todd, Buck and Jason

Getting the most from your new bull

Buying a bull is a long-term investment in the future genetics and sale income of your herd. To get the most from your new bull, it pays to look after him well, especially in the first season of use. It is worth considering insurance to cover transport and the first three to six months of use.

Please complete the delivery instructions supplied by the vendor or agent. Before you take delivery of your new bull, please check the front of our catalogue for a list of treatments that your new bull has received.

Once you take delivery of your new bull, we recommend arranging to have a few PTIC cows or steers in the yards when your new bull or bulls arrive, just to keep them company while they adjust to their new surroundings.

Our sale bulls have all had continued contact with people since weaning, are handled with dogs, utilities and ATV's. We handle all our cattle quietly and with respect. A new bull is a big investment – look after him and you will be rewarded.

UNDERSTANDING SNP BASED POLL TESTS

As you will be aware, Herefords Australia moved to SNP based DNA testing in July 2016. The move to SNP based testing means that we now have a far more accurate test for Poll genes in Hereford Cattle. Previously used Beef CRC based Poll tests would return a result and an accuracy (e.g. Homozygous Polled 98%). With SNP based Poll testing, the Poll gene can now be identified with a lot more accuracy and a description of the poll allele found is included as a subscript. When reporting Poll test results from a SNP based test, the results will be reported as seen below:

| SNP Test Result | Beef CRC Test Result | Detail |
|-------------------------------|----------------------|---|
| P _c P _c | PP | Homozygous Polled – A 'True Polled' animal and will only produce Polled (or Scurred) calves, they will not produce Horned calves. |
| P _c P _f | | |
| P _f P _f | | |
| P _f H | PH | Heterozygous Polled – Animal is Polled or Scurred and carries a Polled and Horned gene and can produce Polled, Horned (or Scurred) calves. |
| P _f H | | |
| HH | HH | Homozygous Horned – The animal is horned and can produce Horned, Polled (or Scurred) calves. |

Please note that the SNP based test is used when requesting a stand-alone Poll test and an 'add-on' to a GBP genotype.

Sale Day Safety

All sale bulls have been screened for temperament and are under normal circumstances, quiet to handle. However, there are inherent risks associated with cattle handling.

Visitors enter the cattle pens at their own risk. Children must not enter the yards.

People entering the yards are at risk of injury. Be especially alert for bulls fighting and pushing around the pens and if one is playful with you do not respond by patting his head. What a bull considers a playful nudge can do physical harm to any human. We do not expect our bulls to be aggressive, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember even the quietest bull can in fact be an unpredictable animal.

Do not crowd the bulls inside the pens. There are many dangers involved in handling livestock, so please use commonsense and be alert at all times. Do not enter pens unnecessarily.

Please call upon any of the agents for an escort through the bulls if required. The days of bravado with stock have passed under the current WH&S legislation.

Pre Sale Video

A pre sale video and bull sale photos are

BREEDPLAN EXPLANATION

BREEDPLAN is a performance valuation program that describes the genetic profile of bulls for a number of commercially important traits. This profile is given as an Estimated Breeding Value (EBV), expressed as a figure (+/-) relative to the breed benchmark of zero (0) for each trait.

The EBVs in this catalogue are Poll Hereford Group Breedplan EBVs and Angus Group Breedplan EBVs and can be directly compared with Poll Hereford Group Breedplan EBVs and Angus Group Breedplan EBVs from other herds.

To evaluate the performance profile of a bull, its EBVs can be directly compared with the EBVs of other bulls, against the breed benchmark of zero (0) or against the current breed average EBV for each trait, which for the 2018 calving year was (for Poll Hereford and Angus):

GROUP BREEDPLAN AVERAGE EBV'S FOR 2019 DROP CALVES

| | Calving Ease DIR (%) | Calving Ease DTRS (%) | Gestational Length (days) | Birth Wt (kg) | 200 Day Wt (kg) | 400 Day Wt (kg) | 600 Day Wt (kg) | Mat Cow Wt (kg) | Milk (kg) |
|---------------|-------------------------|--------------------------|------------------------------|---------------|--------------------|--------------------|--------------------|--------------------|--------------|
| Poll Hereford | +2.1 | +1.8 | -0.5 | +4.1 | +33 | +55 | +78 | +67 | +17 |
| Angus | +1.9 | +2.5 | -4.5 | +4.2 | +48 | +87 | +114 | +98 | +17 |

| | Scrotal Size (cm) | Days to Calving (days) | Carcass Weight (kg) | Eye Muscle Area (sq cm) | Rib Fat (mm) | Rump Fat (mm) | Retail Beef Yield (%) | IMF (%) | Trial Docility |
|---------------|----------------------|---------------------------|------------------------|----------------------------|-----------------|------------------|--------------------------|------------|-------------------|
| Poll Hereford | +2.0 | -2.9 | +52 | +3.5 | +0.7 | +0.8 | +0.8 | +0.5 | +3 |
| Angus | +2.0 | -4.7 | +65 | +6.0 | -0.1 | -0.4 | +0.5 | +2.0 | +6 |

EBVS ARE PROVIDED FOR THE FOLLOWING TRAITS

ACCURACY (%) ~ Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal (or it's progeny, or relatives) then the accuracy of it's EBVs for particular traits will increase. See Understanding Accuracies (http://www.angusaustralia.com.au/BP_Understanding_Accu.htm) for a more detailed explanation.

TRAITS OBSERVED ~ Indicates those traits that have been recorded and are contributing to the EBV's calculated for an animal. (These should appear directly below the table displaying the animals EBV's).

CALVING EASE DIR (%) ~ Estimates of the genetic differences between animals in the ability of their calves from 2 year old heifers to be delivered without assistance.

CALVING EASE DTRS (%) ~ Estimates of the genetic differences between animals in the ability of their 2 year old daughters to calve without assistance.

GESTATION LENGTH (DAYS) ~ Estimates of the genetic differences between animals in the number of days from the date of conception to the calf birth date.

BIRTH WT (KG) ~ Estimates of the genetic differences between animals in calf birth weight.

200-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 200 days of age.

400-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 400 days of age.

600-DAY WT (KG) ~ Estimates of the genetic differences between animals in liveweight at 600 days of age.

MATURE COW WEIGHT (KG) ~ Estimates of the genetic

BREEDPLAN EXPLANATION

differences between animals in cow weight at 5 years of age.

MILK (KG) ~ Estimates of the genetic differences between animals in milk production, expressed as variation in 200-day weight of daughter's calves.

SCROTAL SIZE (CM) ~ Estimates of the genetic differences between animals in scrotal circumference at 400 days of age.

DAYSTO CALVING ~ Estimates of the genetic differences in female fertility, expressed as the number of days from the start of the joining period until subsequent calving.

CARCASE WEIGHT (KG) ~ Estimates of the genetic differences between animals in carcase weight, adjusted to 650 days of age.

EYE MUSCLE AREA (CM²) ~ Estimates of the genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcase.

RIB FAT (MM) ~ Estimates of the genetic differences between animals in fat depth at the 12/13th rib site, in a 300 kg carcase.

RUMP FAT (MM) ~ Estimates of the genetic differences between animals in fat depth at the P8 rump site, in a 300kg carcase

RETAIL BEEF YIELD % (RBY%) ~ Estimates of the genetic differences between animals in percentage retail beef yield, in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%) ~ Estimates of the genetic differences between animals in percentage intra-muscular fat (marbling) at the 12/13th rib site, in a 300 kg carcase.

DOCILITY TRIAL ~ Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless"). Higher, more positive, Docility EBVs are more favourable. For example, a bull with an EBV of +20 would be expected to on average produce 15% more progeny with acceptable temperament than a bull with an EBV of -10.

NET FEED INTAKE TRIAL (KG/DAY ~ Estimates of the genetic differences between animals for feed efficiency. Long fed / Certified Australian Angus Beef \$ Index ~ based on a high fertility self replacing commercial Angus herd where steers are grown out to be long fed for the high quality, high marbled Japanese export market. Selection of animals using this index will increase IMF % of your herd, and emphasis is also placed on 600 day growth.

Short Fed Domestic \$ Index ~ based on a high fertility self replacing Angus herd selling feeder steers and heifers for the short fed domestic feedlot trade. Emphasis is placed on growth to 400 days and high carcase yield while maintaining fertility and marbling. Heavy Grass Fed Steer \$ Index ~ based on a self replacing herd that sells heavy grass fed steers for markets like the EU and light grass fed Jap Ox. Emphasis is on growth and carcase yield while maintaining fertility and marbling.

Terminal \$ Index ~ for herds where no animals are kept for breeding. For example using Angus bulls over dairy cross cows for vealer production or over tropical cows with steers and heifers grown out for short feeding. Emphasis is on growth and carcase yield with no weighting placed on calving ease, female fertility or milk.

NB. Actual \$Index Values for individual animals are sensitive to the assumptions used in the BREEDOBJECT analysis used to calculate the selection index.

NB. EBVs and \$Index Values are calculated using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and The University of New England. Ongoing research and development at AGBU is supported by funding provided by Meat and Livestock Australia.

Notes: Heifers first calf. Longevity in this cow family, grand dam has had 9 calves and great grand dam had 12 calves with her last calf being Lot 10 in this catalogue. Q094 is a smooth skinned, good boned young bull.

DNA Sampling Simplified

TSU, paired to matching NLIS and Management tags, creating an absolute sample-to-animal linkage!

Allflex Livestock Intelligence

Tissue Sampling Unit (TSU)

- Clean, uncontaminated testing, yielding excellent lab results.
- Easy-to-use; collect samples in seconds with a single-squeeze motion.

96-vial well plate protects samples and is compatible with testing laboratories systems.

Also available in bulk packs!

R52 has a good hindquarter with all the capacity needed. High EMA and IMF with positive fats.

Purchaser:..... **\$:**.....

What are Genomics?

Genome: the genetic material of an organism

Genomics: the study of the genome

Genotype: the full genetic makeup of an animal

SNP: single nucleotide polymorphism referred to as SNP's (pronounced SNIPS) are DNA markers

DNA is extracted from the hair sample provided, and the DNA is run on a SNP panel. Herefords Australia utilise 3 different kinds of SNP panels:

- GGPHD 150k – 150,000 SNP DNA markers
- GGPLD 40k – 40,000 SNP DNA markers
- SEQ1 – 140 approx. SNP DNA markers

WHAT WILL GENOMICS TELL ME?

The GGPHD and GGPLD calculate genomic predictions for over 20 traits, including Calving Ease, Milk, Average Daily Gain, Residual Feed Intake, Marbling, Docility and Carcase Weight.

Also included in the GGP tests are the 3 genetic condition, Hypotrichosis, Dilutor and Idiopathic Epilepsy.

Animals that undergo a GGPLD or GGPHD will be parent verified to their sire, in the event that the sire has a SNP profile to compare to.

HOW IS THE GENETIC STATUS OF ANIMALS REPORTED?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF Tested AM Free

AMFU Based on pedigree AM free – Animal has not been tested

AM_% _% probability the animal is an AM carrier

AMC Tested AM-Carrier

AMA AM-Affected

This image shows a full page of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.
